

More and more wheelbase for Land Rover

REGENT Motors Ltd. show the Land Rover in its longer wheelbase form of 86in., but the still longer model with 107in. and correspondingly larger body space has not arrived for inclusion, although all details are available.

The cars shown on this stand include the Rover 90, introduced earlier in the year.

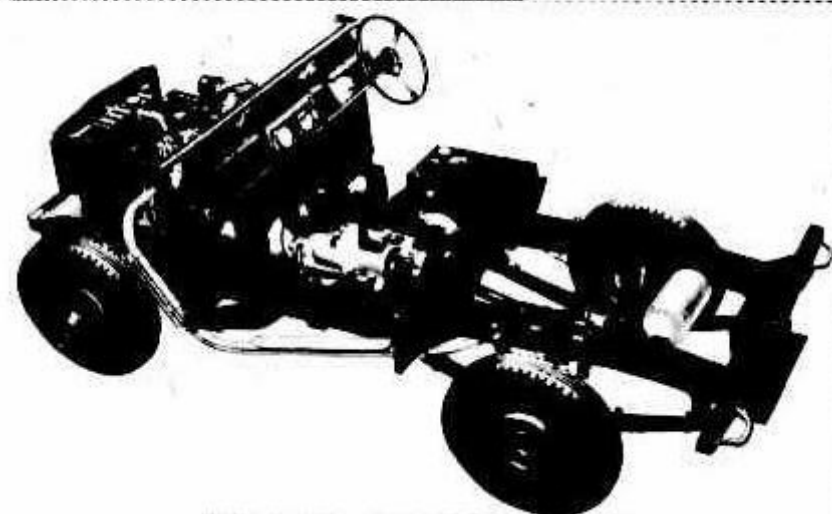

Spare parts and the rapidly developing Australia-wide service system are highlights of the Volkswagen display, which includes the new de luxe export saloon, with an improved engine developing four brake horse power more than the earlier version and more interior space.

Most of the display is concerned with the V.W. Transporters, the commercial range of Volkswagens, all featuring the same air-cooled, rear-engine and similar body construction.

They are the Kombi, which is adaptable to either station wagon or bus service; the pick-up utility, and a delivery van.

A notable feature of the pick-up is that besides a tray body it is equipped with lockers for the storage of valuable goods.

Other models, a bus and an ambulance, have not yet arrived, but are the subject of special displays.

● This year's larger Land Rover (86 ins. wheelbase) is based on this substantial chassis.
